

FastCPI

User Guide — Source-backed Market Price Intelligence

Search · compare · monitor · verify

Goods and services · CPV 2008 · SKU / MPN / GTIN · ten EU markets

Version 1.0.0 · 9 September 2026 · cpi.fastsmc.com

Contents

Section		Pages	What it covers
Start		3–5	Product scope, account access and workspace
Ask & verify		6–10	English/French questions, source evidence and CPV
Monitor		11–14	Watchlists, daily scans and market views
Integrate		15–17	REST API, developer docs and scoped keys
Operate responsibly		18	Coverage limits and a practical workflow

Start

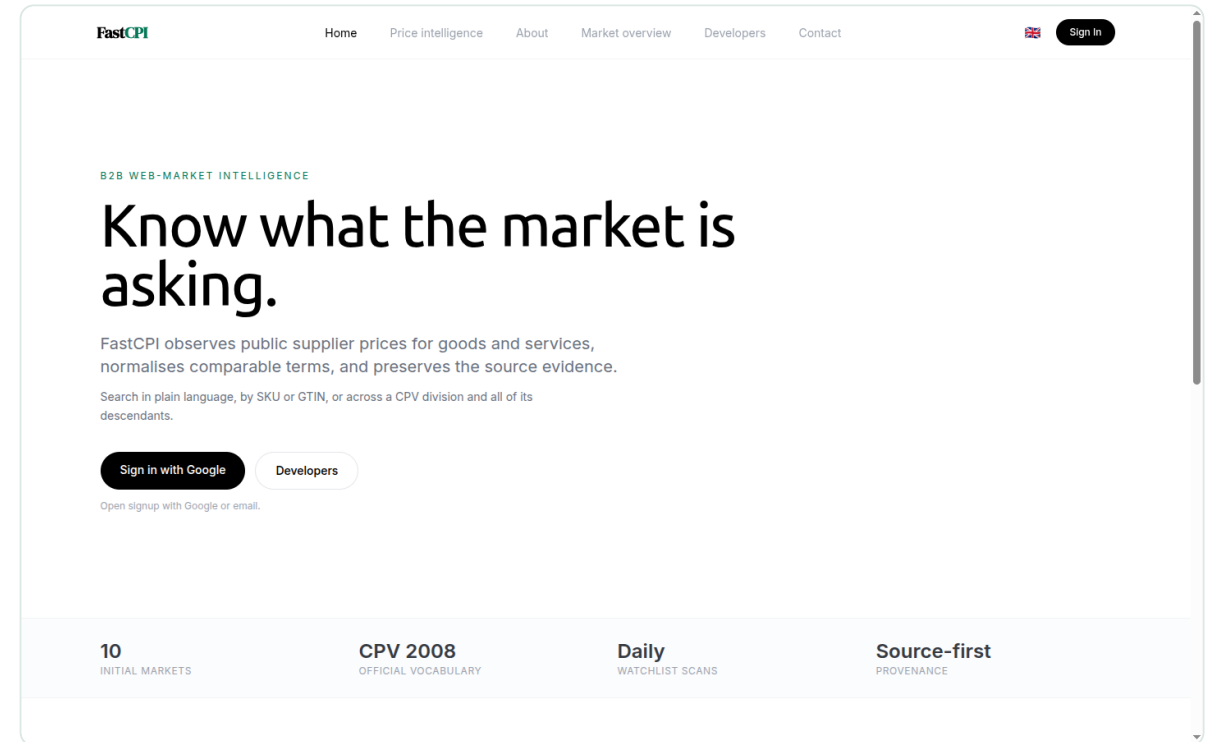

Orient your team around evidence that can be opened, dated and reviewed—not an unsupported “best price” claim.

FastCPI at a glance

FastCPI discovers public pages with Exa, fetches candidate pages, extracts attributable prices and preserves the source URL, capture time, extraction method and warnings.

Use it for public B2B market observation across Germany, Denmark, Estonia, Finland, France, Lithuania, Latvia, the Netherlands, Poland and Sweden.

- Search in plain language or with CPV, SKU, MPN and GTIN identifiers.
- Compare only offers whose units and commercial terms are compatible.
- Turn a recurring requirement into a user-specific daily watch.

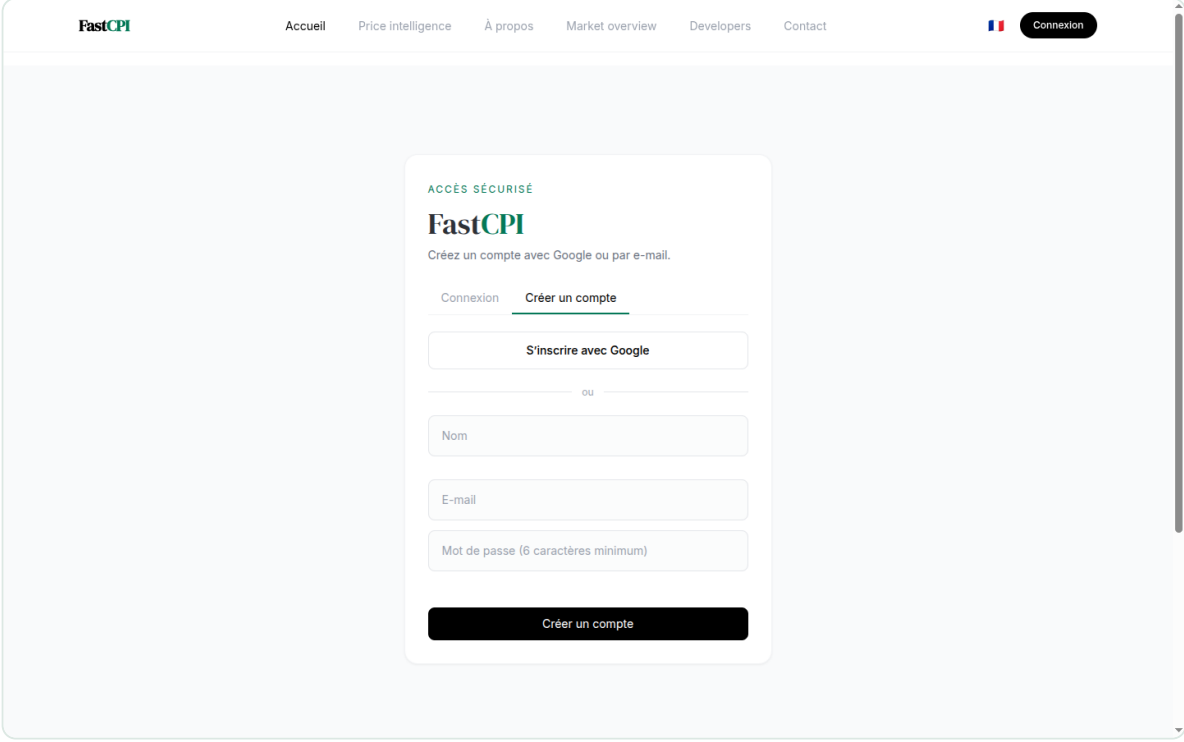

Sign in and choose a language

Open <https://cpi.fastsmc.com> and choose **Sign In**. Google and verified email signup are available without an invitation. Email users confirm ownership before entering the app.

The language control appears on both the landing page and inside the authenticated left pane, so you can switch later without signing out. French covers the complete active workspace: chat, agents, evidence, watchlists, daily scan, market overview and account/API-key controls.

The interface locale does not force the assistant's language. Each answer follows the language of the latest question.

The screenshot displays the FastCPI website's login and registration interface. The top navigation bar includes links for 'Accueil', 'Price intelligence', 'À propos', 'Market overview', 'Developers', and 'Contact', along with a French flag icon and a 'Connexion' button. The main content area features a central card with the heading 'ACCÈS SÉCURISÉ' and the FastCPI logo. Below the logo, it prompts users to 'Créer un compte avec Google ou par e-mail.' The card has two tabs: 'Connexion' and 'Créer un compte', with the latter being active. Under the 'Créer un compte' tab, there is a 'S'inscrire avec Google' button, followed by a separator line with 'ou' in the center. Below this are three input fields for 'Nom', 'E-mail', and 'Mot de passe (6 caractères minimum)'. At the bottom of the card is a black button labeled 'Créer un compte'.

Ask & verify

Ask naturally, keep identifiers exact, and open the cited page before using a price in a sourcing decision.

Ask for prices in English

Describe the required good or service and name the market. Add a precise identifier, pack size, unit, VAT basis, delivery destination or contract period when you know it.

The middle pane contains the full answer and limitations. The right pane opens to a compact set of top hits: at most three extracted observations and five discovery-only sources. Every source is clickable; the evidence pane does not repeat the assistant's full narrative.

“Lowest” always means **lowest observed comparable price in the returned public-source sample**.

The screenshot displays the FastCPI Price Finder interface. The left sidebar contains navigation links: HISTORY, AGENTS, # Procurement, + Market Intelligence, = Comparison, * Monitoring, and ★ Advisory. The main panel shows the search results for "A4 recycled printer paper in France". The results are categorized into "Lowest observed comparable price (FR)", "Second observed offer", and "Discovery-only results". The right sidebar shows "Top hits" with two entries: "Papier XEROX A4 80gr Performer - Electro Dépôt" and "Copy paper hp premium a4 80 g m² matt white 500 sheets".

FastCPI Price Finder

Show me the lowest observed prices for A4 recycled printer paper in France.

* Price Finder

Lowest observed comparable price (FR): 3.97 EUR per each – Papier XEROX A4 80gr Performer at Electro Dépôt (captured 2026-09-09; extraction confidence 88%). VAT status unknown; delivery not confirmed.

Second observed offer: 26.59 USD per each – Copy paper HP Premium A4 80 g/m² matt white 500 sheets at Syncee (captured 2026-09-09; extraction confidence 88%). Converted ≈ 22.89 EUR; VAT status unknown; delivery not confirmed.

These are extracted observations from public B2B/retail pages. No explicit "recycled" confirmation appears in the priced listings. FastCPI did not observe every supplier.

Discovery-only results (relevant pages identified but no price extracted by FastCPI):

- Xerox Papir Recyklovany+ (80g/500list0, A4) | Veashop
- ACO Copy Paper Supplier | Professional Office Paper for High-Volume Printing - ACO
- Papier A4 sécurisé pour vos imprimantes | Etic France
- BM OFFICE Papier A4 pour imprimante 80 g – Lot de 20 rames...
- Dropship Copy paper tecn0 a4 80 g m² matt white 500 - Syncee

Not a claim of complete market coverage. Units are not normalized across offers.

Ask in French

Ask directly in French—for example, « *Montrez-moi les prix observés les plus bas pour le toner HP W2210A en Allemagne.* » FastCPI sends the original question to the agent and search tools; it does not translate or rewrite the query first.

When no attributable in-market price can be extracted, the answer says so. Candidate pages remain visible as **Découverte uniquement** and must not be treated as observed prices.

This distinction is useful: an honest empty result is safer than turning a search snippet, an out-of-market offer or an incompatible substitute into a benchmark.

Recherche de prix

Montrez-moi les prix observés les plus bas pour le toner HP W2210A en Allemagne.

* Recherche de prix

Aucun prix observé n'a été extrait pour le toner HP W2210A en Allemagne.

Aucune page candidate allemande n'a fourni de prix structuré et attribuable (offre observée). Seuls des résultats de découverte (pages potentiellement pertinentes mais sans extraction de prix) ont été identifiés, tous hors marché DE :

HP W2210A - originálny toner | Gigaprint.sk

Hp W2210A toner black ORIGINAL (207A) | Azelado.hu

Hp W2210A toner black ORIGINAL (207A) | Azelado.hu

Toner HP W2210A No 207Bk Original | No Limit Technology

Xerox alternativní toner HP W2210A / 207A | Veashop

Utángyártott Hp W2210A toner black ECO PATENTED NO CHIP | Azelado.hu

Xerox Everyday Black Toner for HP W2210A | Echtveelvoorweinig.nl

SUP TON HP 207X W2210A | NAJ.HR

Ces résultats proviennent de sources publiques hors Allemagne et ne constituent pas une couverture complète du marché. Aucune offre B2B allemande avec prix extrait n'a été identifiée.

Read provenance and comparability

Each observed offer should provide:

1. Supplier/page title and clickable HTTP(S) URL.
2. Original amount, currency and advertised unit.
3. Comparable amount/unit when normalization is supportable.
4. Capture time, extraction method, confidence and warnings.
5. Market and a coverage statement.

Do not rank items when VAT, shipping, MOQ, pack quantity, product variant or service scope is unresolved. Open the source and verify that it is current and deliverable to the intended market.

Discovery-only means “potentially relevant page found”; it does not mean FastCPI observed a usable price there.

Search CPV categories

Enter an eight-digit Common Procurement Vocabulary code, with or without its check digit, or ask for a CPV label in plain language. Broad CPV divisions expand through their imported CPV Version 2008 descendants before market searching.

Useful patterns:

- CPV 30100000-0 and descendants in France
- Trouver les descendants CPV des machines de bureau
- Compare CPV 72611000 hourly support in Estonia and Latvia

Treat a broad-division result as category reconnaissance. Narrow the description, unit and commercial terms before making a supplier comparison.

Monitor

Convert recurring sourcing requirements into daily checks and review both changes and evidence.

Create and manage a watch

Open **Listes de suivi / Watchlists**, name the requirement, enter a description or identifier, choose a market and optionally set a target price. New accounts receive three examples:

- A4 office paper in France;
- HP W2210A toner in Germany;
- hourly technical computer support (CPV 72611000) in Estonia.

Starter watches are user-specific. Deleting one is respected; it is not recreated on every login. The current browser UI creates and lists watches. Edit, pause, delete and run-now controls are the next monitoring slice; those mutations already exist in the REST API where noted in OpenAPI.

Review the Daily Scan

Daily Scan shows active-watch count, 24-hour observations and threshold events. Each watch shows its latest source-backed observation or **Pending first scan / Première analyse en attente**.

Threshold events carry the source URL that caused the alert. Email alerts are sent only when the watch enables notification. Use the page as a morning exception queue: inspect missing scans, review price movements, open evidence, then decide whether procurement action is warranted.

The pilot scheduler currently runs inside the application process. Durable queued scan runs, leases, retry state, domain throttling and cost quotas are the priority next slice.

Use the market overview

The default **Within one country / Dans un même pays** view starts with one selected catalogue item and one country. It compares the latest comparable observation for each distinct supplier offer, showing the lowest price, median, observed spread and clickable source evidence. This is the primary procurement review because prices from competing suppliers in the same country are usually more directly comparable.

Use the item and country selectors to change the benchmark. Open **Across the EU / Dans l'Union européenne** only as a secondary review: it plots each observed country's median and price range, then preserves the underlying supplier links below the chart.

Repeated captures of the same offer do not receive extra weight: the dashboard uses its latest observation. Read every result with its source count, freshness, unit, VAT/delivery warnings and coverage note. The spread remains an observed web sample—not an official inflation measure or a claim of complete market coverage.

Integrate

Use documented, scoped interfaces so external systems receive the same provenance contract as the application.

Developer portal and OpenAPI

Open <https://cpi.fastsmc.com/developers> for the resource guide and links to:

- Swagger UI at </api/docs> ;
- ReDoc at </api/redoc> ;
- versioned OpenAPI at </api/openapi/v1.json> ;
- runtime and compatibility schemas.

Core resources search persisted observations, run live observations, resolve CPV descendants, read market coverage and indices, manage user watchlists and access catalog items. Use `GET /items/{item_id}/price-variance?market=FR` for the same latest-offer country benchmark and secondary EU context shown by the dashboard. Live discovery requires a stronger scope than read-only access.

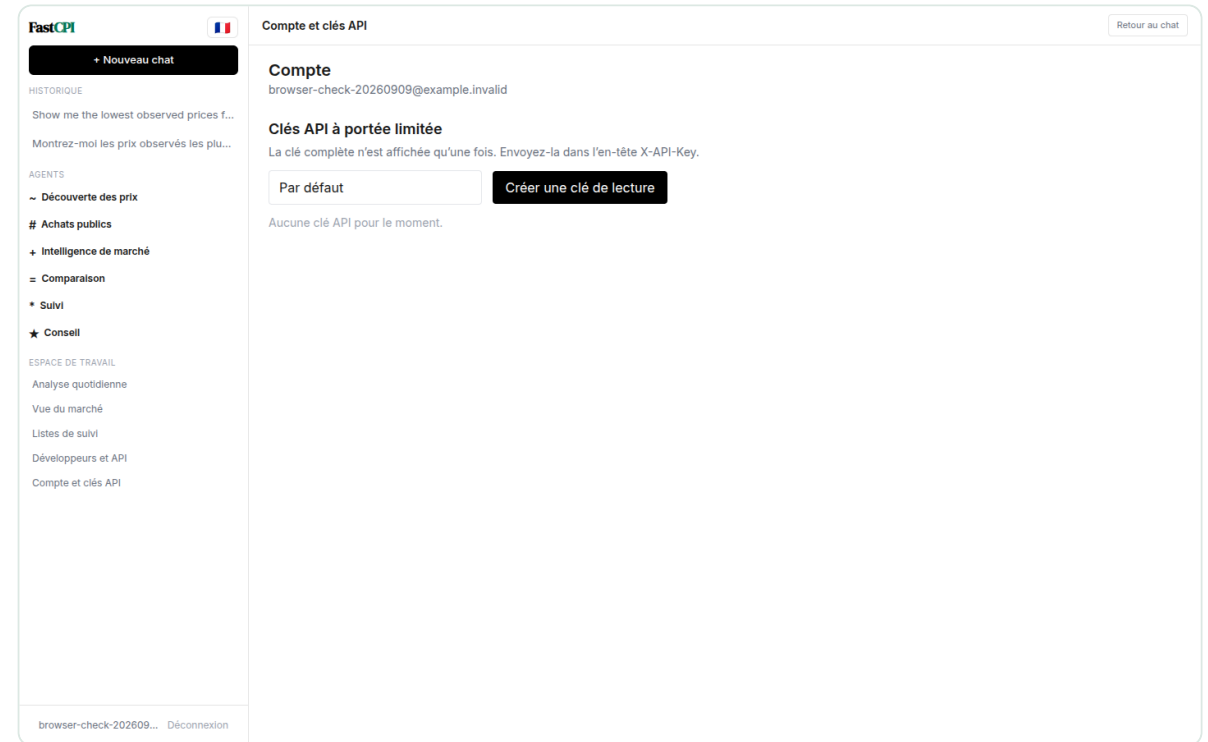

The screenshot shows the FastCPI Developer Platform API V1 page. The header includes the FastCPI logo and navigation links: Accueil, Price Intelligence, À propos, Market overview, Developers, and Contact. A 'Sign In' button is in the top right. The main heading is 'Build with source-backed market observations.' followed by a description: 'Query goods and services by description, CPV code, SKU, MPN or GTIN. Every observed price retains capture time, extraction evidence and its public source URL.' Below this is a row of buttons: Guide (selected), Swagger UI, ReDoc, OpenAPI v1, Runtime OpenAPI, and Compatibility schema. A light green box contains an 'Authentication' note: 'Create a scoped key under Account & API Keys, then send it in the X-API-Key header. Read and live-observation scopes are independently revocable.' The 'API resources' section has two cards. The first, 'Search observations', describes searching persisted, source-backed observations without starting a crawl, with the endpoint `GET /api/v1/prices/search` and access `prices:read`. The second, 'Observe prices', describes running Exa discovery, fetching candidate pages, and persisting attributable evidence, with the endpoint `POST /api/v1/prices/observe` and access `prices:observe`.

Scoped keys and the MCP path

Create an API key under **Account & API Keys**. The full `fcpi_...` value is shown once; store it in a secret manager and send it in the `X-API-Key` header. Revoke and rotate keys independently of your Google/password session.

The planned MCP alpha is read-only: observation search, CPV lookup, market overview, indices, catalog items and methodology resources over `POST /mcp`. It will reuse FastCPI's service layer, tenant isolation and provenance schemas. OAuth protected-resource discovery and consent precede any live crawl or watchlist write tool.

See `docs/ROADMAP.md` for the complete MCP surface and staged acceptance criteria.

A safe weekly operating rhythm

1. **Specify:** capture exact identity, unit, quantity, VAT, delivery, MOQ and service period.
2. **Observe:** search the correct market and separate extracted evidence from discovery-only pages.
3. **Verify:** open every cited URL and exclude stale, substituted or geographically invalid offers.
4. **Compare:** rank only compatible terms; state sample count, capture time and coverage limits.
5. **Monitor:** save important requirements, review Daily Scan and investigate threshold events.
6. **Export/integrate:** use scoped keys and preserve provenance fields downstream.

Current gaps include JavaScript-only/PDF/quote-only sources, shallow supplier-specific parsers, incomplete pack/VAT/shipping/MOQ normalization and process-local scheduling. Report questionable evidence rather than silently treating it as comparable.

Support: use the Contact page. **API:** </developers> . **Roadmap:** <docs/ROADMAP.md> .
